Environmentally Advanced ACQ® Protection

Taiga Select with ACQ is the preferred choice as a new generation of preserved wood, providing the same level of performance as standard preserved wood without the use of arsenic or chromium. **Taiga Select** is preserved with ACQ, an environmentally advanced copper and quat preservative system that provides long-term protection from rot, decay and termites without the use of any EPA listed hazardous chemicals.

Taiga Select with ACQ Applications

Taiga Select with ACQ can be used for any construction project and is particularly suited for applications such as decking, playgrounds, walkways, benches, outdoor tables and chairs, fencing, gazebos and landscaping, where long-term protection against decay and termites is a priority. **Taiga Select with ACQ** preserved wood can be used in above-ground, or ground-contact exposures, in contact with fresh water and in any building application where protection from fungal decay and termites is required.

Painting and Staining or Natural Weathering

Taiga Select with ACQ can be painted or stained to match any outdoor colour scheme. High-quality oil and latex based paints and stains are recommended. Water repellent coatings can be applied to improve the weathering performance of **Taiga Select with ACQ**. It is important to ensure the wood is dry and free from surface deposits prior to applying any coating. Left uncoated, or with clear water repellent coatings, **Taiga Select with ACQ** will initially weather to a natural brown colour, eventually turning grey following long-term exposure to the sun.

Nails, Fasteners and Fittings

For the best results, hot-dipped galvanized or stainless steel fasteners and fittings are recommended. An extensive list of approved fastener systems is available from your **Taiga Select with ACQ** supplier. Direct contact between **Taiga Select with ACQ** preserved wood and aluminum fasteners and fittings is not recommended.

Handling and Safety Information

Taiga Select with ACQ preserved wood is easy to work with, requiring no special precautions other than routine woodworking safety procedures. When working with or machining **Taiga Select with ACQ**, the following safety precautions should be followed:

- Gloves should be worn to protect against splinters and abrasions.
- A dust mask should be worn when machining wood to reduce the inhalation of wood dusts.
- Appropriate eye protection should be worn to reduce the potential for eye injury from wood dust or particles and flying debris during machining and construction.
- Wash thoroughly with mild soap and water after working with **Taiga Select with ACQ**.
- Wood scraps should be disposed of by burial in accordance with applicable federal, provincial and local regulations. Do not burn.

Taiga Select with ACQ Performance Guaranteed

Taiga Select with ACQ is backed by a Lifetime Limited Warranty!
